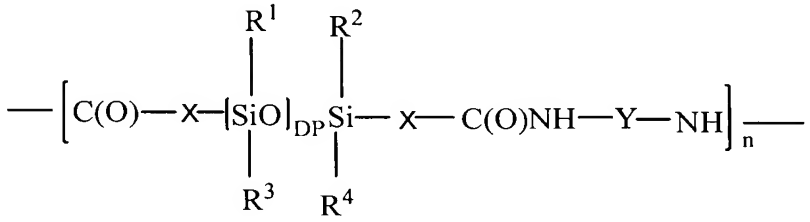
AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-73. (Canceled).

74. (Previously Presented): A method of applying a transfer-resistant composition to a keratin material comprising applying to the keratin material a liquid, transfer-resistant composition comprising at least one silicone-polyamide copolymer, at least one silicone resin film forming agent, and at least one coloring agent, wherein the silicone-polyamide copolymer comprises multiples of a unit represented by the following formula (A):



where: (a) DP is between 1 and 700; (b) n is a number selected from the group consisting of 1-500; (c) X is a linear or branched chain alkylene having 1-30 carbons; (d) Y is selected from the group consisting of linear or branched chain alkylenes having 1-40 carbons; (d) R^1, R^2, R^3 and R^4 are the same or different and may be selected from the group consisting of methyl, ethyl, propyl, isopropyl, a siloxane chain, and phenyl.

75. (Previously Preseted): The method of claim 74, wherein the composition further comprises at least one volatile oil.

76-77. (Canceled).

78. (Previously Presented): The method of claim 74, wherein the film former is selected from the group consisting of polymethylsilsesquioxane, trimethylsiloxysilicate, and mixtures thereof.

79. (Previously Presented): The method of claim 74, wherein the film former is trimethylsiloxysilicate.

80. (Canceled).

81. (Previously Presented): The method of claim 75, wherein the composition comprises at least one volatile oil which is a volatile hydrocarbon oil.

82. (Canceled).

83. (Previously Presented): The method of claim 81, wherein the volatile oil is isododecane.

84. (Canceled).

85. (Previously Presented): The method of claim 74, wherein the silicone-polyamide copolymer is present in an amount ranging from about 0.5% to about 10% by weight relative to the total weight of the composition.

86. (Canceled).

87. (Previously Presented): The method of claim 74, wherein the composition is anhydrous.

88. (Previously Presented): The method of claim 87, wherein the composition further comprises at least one volatile oil.

89. (Canceled).

90. (Previously Presented): The method of claim 87, wherein the film former is selected from the group consisting of polymethylsilsesquioxane, trimethylsiloxysilicate, and mixtures thereof.

91. (Previously Presented): The method of claim 87, wherein the film former is trimethylsiloxysilicate.

92. (Canceled).

93. (Previously Presented): The method of claim 87, wherein the composition comprises at least one volatile oil which is a volatile hydrocarbon oil.

94. (Previously Presented): The method of claim 91, wherein the composition comprises at least one volatile oil which is a volatile hydrocarbon oil.

95. (Canceled).

96. (Previously Presented): The method of claim 87, wherein the silicone-polyamide copolymer is present in an amount ranging from about 0.5% to about 10% by weight relative to the total weight of the composition.

97. (Canceled).

98. (Previously Presented): The method of claim 74, wherein the method comprises applying to the lips a composition comprising at least one silicone-polyamide copolymer, at least one silicone resin film forming agent, and at least one coloring agent.

99. (Previously Presented): The method of claim 98, wherein the composition further comprises at least one volatile oil.

100-101. (Canceled).

102. (Previously Presented): The method of claim 98, wherein the film former is selected from the group consisting of polymethylsilsesquioxane, trimethylsiloxysilicate, and mixtures thereof.

103. (Previously Presented): The method of claim 98, wherein the film former is trimethylsiloxysilicate.

104. (Canceled).

105. (Previously Presented): The method of claim 98, wherein the composition comprises at least one volatile oil which is a volatile hydrocarbon oil.

106. (Canceled).

107. (Previously Presented): The method of claim 105, wherein the volatile oil is isododecane.

108. (Canceled).

109. (Previously Presented): The method of claim 98, wherein the silicone-polyamide copolymer is present in an amount ranging from about 0.5% to about 10% by weight relative to the total weight of the composition.

110. (Canceled).

111. (Previously Presented): The method of claim 98, wherein the composition is anhydrous.

112. (Previously Presented): The method of claim 11, wherein the composition further comprises at least one volatile oil.

113. (Canceled).

114. (Previously Presented): The method of claim 111, wherein the film former is selected from the group consisting of polymethylsilsesquioxane, trimethylsiloxysilicate, and mixtures thereof.

115. (Previously Presented): The method of claim 111, wherein the film former is trimethylsiloxysilicate.

116. (Canceled).

117. (Previously Presented): The method of claim 111, wherein the composition comprises at least one volatile oil which is a volatile hydrocarbon oil.

118. (Previously Presented): The method of claim 115, wherein the composition comprises at least one volatile oil which is a volatile hydrocarbon oil.

119. (Canceled).

120. (Previously Presented): The method of claim 111, wherein the silicone-polyamide copolymer is present in an amount ranging from about 0.5% to about 10% by weight relative to the total weight of the composition.

121. (Canceled).

122. (Previously Presented): The method of claim 74, wherein the method comprises applying to the skin a composition comprising at least one silicone-polyamide copolymer and at least one coloring agent.

123. (Previously Presented): The method of claim 122, wherein the composition further comprises at least one volatile oil.

124-125. (Canceled).

126. (Previously Presented): The method of claim 122, wherein the film former is selected from the group consisting of polymethylsilsesquioxane, trimethylsiloxysilicate, and mixtures thereof.

127. (Previously Presented): The method of claim 122, wherein the film former is trimethylsiloxysilicate.

128. (Canceled).

129. (Previously Presented): The method of claim 122, wherein the composition comprises at least one volatile oil which is a volatile hydrocarbon oil.

130. (Canceled).

131. (Previously Presented): The method of claim 129, wherein the volatile oil is isododecane.

132. (Canceled).

133. (Previously Presented): The method of claim 122, wherein the silicone-polyamide copolymer is present in an amount ranging from about 0.5% to about 10% by weight relative to the total weight of the composition.

134. (Canceled).

135. (Previously Presented): The method of claim 122, wherein the composition is anhydrous.

136. (Previously Presented): The method of claim 135, wherein the composition further comprises at least one volatile oil.

137. (Canceled).

138. (Previously Presented): The method of claim 135, wherein the film former is selected from the group consisting of polymethylsilsesquioxane, trimethylsiloxysilicate, and mixtures thereof.

139. (Previously Presented): The method of claim 135, wherein the film former is trimethylsiloxysilicate.

140. (Canceled).

141. (Previously Presented): The method of claim 135, wherein the composition comprises at least one volatile oil which is a volatile hydrocarbon oil.

142. (Previously Presented): The method of claim 139, wherein the composition comprises at least one volatile oil which is a volatile hydrocarbon oil.

143. (Canceled).

144. (Previously Presented): The method of claim 135, wherein the silicone-polyamide copolymer is present in an amount ranging from about 0.5% to about 10% by weight relative to the total weight of the composition.

145. (Canceled).

146. (Previously Presented): The method of claim 74, wherein the method comprises applying to eyelashes a composition comprising at least one silicone-polyamide copolymer, at least one silicone resin film forming agent, and at least one coloring agent in an amount sufficient to make-up the eyelashes.

147. (Previously Presented): The method of claim 74, wherein the method comprises applying to hair a composition comprising at least one silicone-polyamide copolymer, at least one silicone resin film forming agent, and at least one coloring agent.

148. (Previously Presented): The method of claim 74, wherein the method comprises applying to a nail a composition comprising at least one silicone-polyamide copolymer, at least one silicone resin film forming agent, and at least one coloring agent.

149. (Previously Presented): The method of claim 74, wherein the silicone-polyamide copolymer is a nylon 611/dimethicone copolymer.

150. (Previously Presented): The method of claim 98, wherein the silicone-polyamide copolymer is a nylon 611/dimethicone copolymer.

151. (Previously Presented): The method of claim 122, wherein the silicone-polyamide copolymer is a nylon 611/dimethicone copolymer.

152. (Previously Presented): The method of claim 147, wherein the silicone-polyamide copolymer is a nylon 611/dimethicone copolymer.

153. (Previously Presented): The method of claim 148, wherein the silicone-polyamide copolymer is a nylon 611/dimethicone copolymer.

154. (Previously Presented): The method of claim 79, wherein the trimethylsiloxysilicate is present in an amount ranging from about 0.1% to about 30% by weight relative to the total weight of the composition.

155. (Previously Presented): The method of claim 91, wherein the trimethylsiloxysilicate is present in an amount ranging from about 0.1% to about 30% by weight relative to the total weight of the composition.

156. (Previously Presented): The method of claim 85, wherein the silicone resin film forming agent is present in an amount ranging from about 0.1% to about 30% by weight relative to the total weight of the composition.

157. (Previously Presented): The method of claim 98, wherein the silicone resin film forming agent is present in an amount ranging from about 0.1% to about 30% by weight relative to the total weight of the composition.

158. (Previously Presented): The method of claim 122, wherein the silicone resin film forming agent is present in an amount ranging from about 0.1% to about 30% by weight relative to the total weight of the composition.

159. (Previously Presented): The method of claim 74, wherein the silicone-polyamide copolymer is present in an amount ranging from about 0.1% to about 20% by weight relative to the total weight of the composition.

160. (Previously Presented): The method of claim 87, wherein the silicone-polyamide copolymer is present in an amount ranging from about 0.1% to about 20% by weight relative to the total weight of the composition.

161. (New): The method of claim 79, wherein the silicone-polyamide copolymer is a nylon 611/dimethicone copolymer.

162. (New): The method of claim 91, wherein the silicone-polyamide copolymer is a nylon 611/dimethicone copolymer.

163. (New): The method of claim 103, wherein the silicone-polyamide copolymer is a nylon 611/dimethicone copolymer.

164. (New): The method of claim 115, wherein the silicone-polyamide copolymer is a nylon 611/dimethicone copolymer.

165. (New): The method of claim 127, wherein the silicone-polyamide copolymer is a nylon 611/dimethicone copolymer.

166. (New): The method of claim 139, wherein the silicone-polyamide copolymer is a nylon 611/dimethicone copolymer.
